                                                                         The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from

                                                                                                                                                                                                                                                                                                                                                                         AAR67153-R67163 and AAR67174-R67183 are bovine glial cell growth factor-1 (GGF-1) peptide fragments. A 30-36kD polypeptide factor known to have glial cell mitogenic activity, which includes one of the above peptide fragments in its amino acid sequence is claimed. The polypeptide can be used to treat a variety of mammalian skeletal, cardiac and smooth muscle diseases, including acetylcholine receptor deficiency.

(GGF-I). These fragments were obtained by Jysyl endopeptidase and
protease v8 digests. These sequences have Schwann cell mitogenic
activity in the presence of foetal calf plasma. These sequences (and
human GGF2, see AAR86628) are used to stimulate mitogenesis of glial
cells, for prophylaxis or treatment of a pathophysiological condition of
the nervous system in a mammal. Also, for identification of a receptor,
for treatment of conditions of peripheral nerve damage (e.g.
centreatment of conditions of peripheral nerve damage (e.g.
centreatment of conditions of Schwann cells), treatment of
neurodegenerative disorders in mammals, for inducing neural
centreated by inhibiting this sequence binding to its receptor.
These peptides are also able to induce synthesis of acetylcholine
                                                                                                                                                                                                                                                                                                                                                Matches

It has mitogenic activity stimulating the division of Schwann cells, and exhibits a mol. wt. of 43-35kD when carrying native glycosylation. It was digested with trypsin and lwylendopeptidase to obtain novel peptides AAR49858-R49866 and AAR49867-R49871 respectively. When peptides AAR49866-R49866 were sequenced to completion it was found that none of these sequences is apparently related to GGF-I or GGF-II peptide sequences. A polypeptide contg. any of the sequences in AAR49858-AAR49871 is claimed, as is DNA encoding each of the peptides. (Updated on 25-MAR-2003 to correct PN field.)

```
CC against Mycobacterium pathogens comprises at least one immunodominant epitope of at least one majorly abundant coextracellular protein, i.e. the M.tuberculosis 110, 80, 71, 58, 45, CC 32A, 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins, or their cc analogues, homologues and subunits. The present sequence represents an CC immunodominant epitope from the major abundant extracellular product CC 30 KD protein. The vaccinating agents are used to protect against (or to treat existing) infections by Mycobacterium (especially M. CC tuberculosis) while the epitopes can also be used to detect presence CC of an immune response to a Mycobacterium pathogen. The vectors, CC containing the DNA for the extracellular proteins, are used to transform CC cells for production of recombinant DNA molecules. More generally the DNA from other pathogens can be used in vaccines, e.g. against other CC DNA can be used, a wide range of effective compositions can be produced. CT they generate a response against the antigens most often found on CC infected cells during the infection, regardless of the strength or Specificity of the immune response. The vaccines are easy to produce CC and less toxic than known killed or attenuated vaccines, so can be given to immunocompromised subjects, e.g. those with HIV infection.

Sequences shown in AAW75587 to AAW75641 represent synthetic peptides cc derived from the native 30kD major secretory protein of M. tuberculosis. Cc These peptides are used for splenic lymphocyte profileration assays to cidentify the immunodominant T-cell epitope of the 30kD protein. The cc invention provides an agent for vaccinating mammals against Cc Mycobacterium. The agent comprises at least one of the major abundant cc extracellular 110, 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or cc 12 kD proteins of M. tuberculosis, or at least of their immunodominant cc epitopes and interleukin-12 (II-12) or MF59 as adjuvants. The agent cc containing the nucleic acid encoding the extracellular products are used ct raise a protective or therapeutic immune response against cc mycobacterium, specifically M. tuberculosis. The immunodominant epitopes and inso be used (typically in a cutaneous hypersensitivity test) to detect an immune response to vaccination. Preparation of the agent does not require selection of the most immunogenic products, so large scale production and purification are easy, resulting in a consistent, cc standardised formulation, having lower toxicity than killed or attenuated component) and are safe even in immunocompromised components and are safe even in immunocompromised component even development of an opsonising humoral response that the consistence of the second intracellular pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

The present invention describes a method for predicting the biological activity of new receptor modulating compounds (I) using novel oligomeric CC peptides (biokeys) which have differential abilities to bind to 2 CC different receptor conformations. The method is used to identify new CC drugs that are physiological or pharmacological agonists/antagonists and CC conditions. The system may be used as a primary screening tool to CC conditions. The system may be used as a primary screening tool to CC characterise selective oestrogen receptor modulators (SERMs) in terms of CC agonist and antagonist function and to predict possible clinical effects of SERMs such as tissue and receptor specificity. The method can also be CC components are producing agonistic and antagonistic activity. The method CC components are producing agonistic and antagonistic activity. The method CC glucocorticoid, thyroid, vitamin D, beta-adrenergic, dopamine and CC epidermal growth factor, to identify, characterise and classify De used with other receptors (e.g. progesterone, androgen, CC modulators of receptor activity. Peptides comprising a LIXIL motif may be used to modulate the oestrogen receptor in treating e.g. breast and CC ovarian cancer and ameliorating the effects of menopause, including costeoporosis. AAV65439 to AAV65622 represent oestrogen receptor in the exemplification of the present invention. AAZ35740 to AAZ35745 cc invention.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                 Score

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

   pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       •

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq. 12:285-287(2001).
FUNCTION: Has phospholipase and triglyceride lipase activities.
Hydrolyzes high density lipoproteins (HDL) more efficiently than
other lipoproteins. Binds heparin (By similarity).
CATALYTIC ACTIVITY: Triacylglycerol + H(2)0 = diacylglycerol + a
                                                                                                                                                                                                                                                                                                                                                       fatty acid anion.
SUBCELLULAR LOCATION: Secreted (By similarity).
MISCELLANBOUS: It is termed endothelial lipse due to the fact
that it is synthesized in endothelial cells, a characteristic that
distinguishes it from other members of the family. However this
protein is also expressed in other cell types.
SIMILARITY: BELONGS TO THE ABHYDROLASE SUPERFAMILY. LIPASE FAMILY.
                                                                                                                                                                                     SWISS-PROT entry is copyright. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                   Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ANY15618-Y15759 represent peptides used to make the fluorogenic or CC fluorescent reporter molecules of the invention. These molecules contain a peptide molety (e.g. present sequence) which acts as a CC substrate for enzymes involved in apoptosis or protease or peptidase CC enzymes. The compounds can be used as fluorogenic or fluorescent CC substrates for enzymes. Depending on the peptide molety used, the CC fluorescent molecules can be used for detecting or measuring the CC activity of an enzyme involved in the apoptosis cascade in cells; to CC determine whether a test compound has an effect on an enzyme involved CC an animal with cancer to treatment with chemotherapeutic agents or CC enhances cell death of test cells; for determining whether a test substance inhibits, prevents, causes or CC enthances cell death of test cells; for determining whether a test compound has an effect on the activity of a viral protease in cells; CC and for measuring the activity of a viral protease in cells; CC and for measuring the activity of a protease or peptidase in cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC a halobenzoyl group on the fluorophore. They are of the structure CC peptide-Y-2, where Z represents a halo-substituted benzoyl blocking CC group, Y is a fluorescent or fluorigenic moiety (preferably a fluorescent or fluorigenic moiety (preferably a structure). The fluorescent or fluorigenic moiety (preferably a fluorescent or fluorigenic moiety (preferably a fluorescent or fluorigenic moiety) and the peptide-Y bond is cleavable by the enzyme being CC assayed. The labelled peptides are reporters for detecting intracellular proteally fluored in protection and the peptides and the enzymes involved in CC cytomegalovirus and hepatitis C virus proteases); and methionine CC cytomegalovirus and hepatitis C virus proteases); and methionine CC aminopeptidase type 2 (MetAP-2). The peptides are particularly used to identify modulators of these enzymes which may be potentially useful as agents for treating conditions such as cancer, neurodegeneration, CC autoimmune diseases, myocardial infarction and virla infection.

CC Modulators identified may also be used to prolong the life of cells being CC cultured for recombinant protein production, or to monitor the treatment of cancer with chemotherapeutic agents. Inhibitors of MetAP-2 are potential anti- angiogenic or anticancer agents. Sequences

CC ANYBOTRA-YBO910 represent peptides, some of which are specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                    The invention relates to fluorescently labelled peptides containing a halobenzoyl group on the fluorophore. They are of the structure peptide-Y-2, where I represents a halo-substituted benzoyl blocking group, Y is a fluorescent or fluorigenic molety (preferably a rhodamine), and the peptide-Y bond is cleavable by the enzyme being assayed. The labelled peptides are reporters for detecting intracellular proteolytic enzymes, particularly caspases and other enzymes involved in apoptosis; viral proteases (e.g., HIV, herpes simplex virus-1, human cytomegalovirus and hepatitis C virus proteases); and methionine aminopeptidase type 2 (MetAP-2). The peptides are particularly used to identify modulators of these enzymes which may be potentially useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

Modulators identified may also be used to prolong the life of cells being cultured for recombinant protein production, or to monitor the treatment of cancer with chemotherapeutic agents. Inhibitors of MetAP-2 are potential anti- angiogenic or anticancer agents. Sequences AAY80782-Y80910 represent peptides, some of which are specifically claimed, which may be used in assay methods according to the invention.
                                                                                                                    The present invention relates to a culture method for propagating a plant from a plant starting material, where root or shoot initiation is stimulated by introducing a gene into the starting material which allows the reduction or absence of phytochrome addition to the culture. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vegetative propagation; RKS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A thaliana receptor kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-JUL-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, jastes and HIV infection.
